

Yes, I agree with your your thinking.

For the initial phase, **Problem Aware** should be our main focus.

PloverCRM is not yet a category leader, so targeting completely unaware people will take too much education. Solution-aware people are already comparing known CRMs, so it will be harder and more expensive to win them at the start.

The best starting point is:

People who already feel the pain, but have not yet chosen the solution.

That is where PloverCRM can enter strongly.

My Recommendation

Primary Focus: Problem Aware

Your homepage should mostly speak to people who feel problems like:

“Leads are coming, but we lose track.”

“Follow-ups are missed.”

“Forms are not enough.”

“We do not know which leads came from where.”

“Our team is not managing leads properly.”

“Our website is getting inquiries, but we do not have a system.”

This audience is easier to move because they already feel the pain.

They do not need basic education like unaware people.

They also do not need deep CRM comparison like solution-aware people.

They need someone to clearly say:

“Your problem is not lead generation only. Your problem is lead management after capture.”

That is the core positioning.

Homepage Language Strategy

1. Should homepage language be completely problem-aware?

Mostly yes, but not 100%.

The hero section should speak directly to problem-aware people.

Example direction:

Stop Losing Leads After They Submit the Form

or

Turn Scattered Website Leads Into a Clear Follow-Up System

or

Your WordPress Website Gets Leads. PloverCRM Helps You Manage and Convert Them.

This type of language immediately attracts the right visitor.

It does not sound too technical.

It does not force them to already know CRM terminology.

It connects with the pain.

2. Should we include other awareness levels?

Yes, but only in the right sections.

The homepage should not be only one awareness stage. A good homepage should move the visitor through a journey.

My suggested homepage flow:

Homepage Section	Awareness Stage	Purpose
Hero	Problem Aware	Make them feel understood
Problem Section	Problem Aware	Show the cost of scattered leads

Solution Intro	Solution Aware	Introduce PloverCRM as the answer
Features / Workflow	Product Aware	Show how it works
Use Cases	Problem + Solution Aware	Make it relevant to their business
Proof / Trust	Product Aware	Reduce doubt
Final CTA	Most Aware	Ask for action

So the homepage should **start problem-aware**, then gradually move toward solution-aware and product-aware.

What I Prefer

I would not make the homepage sound like:

“The best CRM for WordPress.”

That is solution-aware language. It puts us directly against big CRM competitors.

I would also not make it too broad like:

“Grow your business with smarter tools.”

That is too unaware and weak.

The best positioning is between pain and outcome:

“Capture, track, and follow up with every WordPress lead from one simple system.”

This speaks to the problem, but also introduces the solution.

Best Strategic Position

For now, PloverCRM should not sell itself as a generic CRM.

It should sell itself as:

A lead management system for WordPress businesses that are losing control after lead capture.

That is more specific.

It is easier to understand.

It gives us a sharper market entry.

Recommended Homepage Core Message

My preferred homepage direction:

Stop Losing WordPress Leads After They Submit the Form

Subheadline:

PloverCRM helps you capture, track, assign, and follow up with every lead from one simple WordPress-based CRM.

This works because:

It starts with a real pain.

It mentions WordPress clearly.

It explains what the product does.

It does not sound too technical.

It is specific enough for conversion.

Final Partner Advice

Initially, we should focus the website, ads, content, and landing pages around **Problem Aware messaging**.

But the homepage should still include enough **Solution Aware** and **Product Aware** sections to help visitors understand why PloverCRM is the right answer.

So the formula is:

Lead with the problem.

Position PloverCRM as the system.

Prove it with features and workflow.

End with a clear action.

That is the strongest direction for PloverCRM at this stage.
